Ceviker Sinan-Deniz

Software Developer

About Me

I am a passionate **full-stack** developer with strong background in React and Next.js, also having prior experience with Django for backend. Over the past year, I've built web apps with rich features, various integrations and CMS integrated and customized for customers requirements - generally Sanity and Payload, but also Strapi or custom made ones. I keep my projects private on github, but I am willing to share them with potential employers.

I am always eager to learn new technologies and solve complex problems, and I like working in collaborative environments where I can exchange ideas and improve my skills..

Work Experience

Freelancer
August 2023 to Present
