

Sinan-Deniz Ceviker *AI & Software Engineer*

Groningen, NL | denizceviker12@gmail.com | LinkedIn | GitHub | Website

Hands-on engineer building production-ready systems across machine learning, full-stack web, mobile, and desktop apps.

PROFESSIONAL EXPERIENCE

Software Engineer Internship, TNO

02/2026 – 06/2026
Groningen, Netherlands

- Implement backend services exposing standardized access to domain-specific data models for AI systems.
- Prototype AI interoperability protocols and developer tooling, mapping heterogeneous APIs into unified MCP-based interfaces.

Machine Learning Intern, Youwe

09/2025 – 02/2026
Groningen, Netherlands

- Built a **Sprint Health Classifier** using synthetic and real Agile data, reconstructing sprint states over time via preprocessing of Jira exports.
- Designed labeling logic and trained models robust to distribution shift, achieving **96% accuracy on unhealthy sprints from sprint start** and near-perfect classification at completion.

Frontend Developer - Student Assistant (Part-Time),

University of Groningen

08/2025 – Present
Groningen, Netherlands

- Built interactive dashboards for building occupancy, utilization, and capacity planning used by university staff.
- Implemented performant data visualizations supporting energy efficiency and sustainability initiatives.

Software Engineer, Freelancer

08/2024 – Present
Groningen, Netherlands

- Delivered end-to-end software systems (web, mobile, desktop) for SMEs across Europe.
- Built automation-driven platforms with Next.js, NestJS, React Native, Expo, and Tauri.

PROJECTS

PLC Remote Control App, Industrial PLC + BLE

- Developed a mobile app enabling **Bluetooth-based remote control of PLC-driven industrial machines**, replacing physical HMI interaction.
- Reverse-engineered PLC communication, designed a scalable adapter-based architecture for multiple machine types, and delivered a **production APK used in-field**.

Plastmach Group, Multi-Brand Digital Platform

- Designed a modular full-stack platform (Next.js + Payload CMS) supporting multiple brands, configurable products, and non-technical content management.
- Built automated data pipelines and dynamic pricing logic, contributing to measurable growth.

SnatchVid, Cross-Platform Desktop App

- Built a cross-platform desktop app using Tauri (Rust backend + React frontend) for video downloading and processing.
- Integrated ffmpeg and yt-dlp, optimized startup time and memory usage, and packaged production installers.

EDUCATION

Bachelor's Degree, Artificial Intelligence, University of Groningen

09/2023 – 2026 | Groningen, Netherlands

- **Specialization:** Machine Learning (Neural Networks, Reinforcement Learning, Uncertainty in ML) and Robotics (Robotics Practical, Social Robotics)
- Coursework highlights: Applied Machine Learning, Robotics Practical, Signals & Systems, Data Science

SKILLS

Software Engineering: Next.js, React, TypeScript, Node.js, NestJS, React Native, Tauri, Rust

AI: Python, Machine Learning, Neural Networks, Reinforcement Learning, Time Series Forecasting, Anomaly Detection, RAG

Systems & Data: Docker, Linux, CI/CD, SQL, NoSQL, API Design, Data Pipelines, REST APIs

Embedded: PLC, Bluetooth Low Energy (BLE), Embedded Systems, C, QNX

LANGUAGES

Romanian (Native), **English** (Fluent), **Turkish** (Proficient)
